KIO Partner Profile

StratosOne™ by Oreico

Global connectivity Owned infrastructure Applied artificial intelligence

StratosOne™ by Oreico brings Oreico's engineering and infrastructure experience together with a new generation of private cloud and artificial intelligence solutions. We integrate international networks, financial infrastructure, managed services and AI applications for businesses that need technology deployed into reliable, sustainable operations.

Our capabilities are backed by owned infrastructure, a presence in KIO data centers and experience connecting financial institutions, brokers, markets and international information providers. We design, implement and manage complete solutions, coordinating the technologies and providers involved from connectivity through applications.

Financial industry experience supporting enterprise innovation

Since 2010, Oreico has delivered infrastructure projects for Mexico's financial sector, including trading desk communications, voice and data networks, recording and cloud services. Our experience includes implementations for major banking institutions and connectivity and infrastructure projects for Refinitiv, part of LSEG.

Oreico connects more than 40 financial institutions in Mexico through its network services. This experience in demanding operational environments supports the development of StratosOne™: AI solutions backed by infrastructure engineering, integration and operational capabilities.

International connectivity and Financial Markets Network

We integrate and manage voice and data connectivity linking financial institutions with banks, brokers, markets and information providers in Mexico and internationally. Our participation in IPC Financial Markets Network enables access to an international financial community and coordinated connections for trading operations and information distribution.

Our services encompass network design, carrier coordination, link implementation, interconnections and technical support. We centralize the management of multiple providers and connections to simplify the customer's operations.

Private cloud in Mexico on Dell Azure Stack Hub

Oreico owns and operates private cloud infrastructure in Mexico based on Dell Azure Stack Hub. This capability supports enterprise applications and AI services with control over infrastructure, data location and integration with customer systems.

We design private and hybrid environments combining our cloud, customer infrastructure and external services according to project requirements. We integrate compute, storage, networking and technical management to support workloads from implementation through ongoing operation.

Applied artificial intelligence with StratosOne™

We develop and implement AI solutions addressing specific business challenges: inventory optimization, demand forecasting and procurement decision support, document analysis, workflow automation, computer vision and conversation analysis.

We combine specialized applications, language models and processing capabilities with each organization's data and systems. Deployment options include our private cloud, customer infrastructure and hybrid architectures, with GPU acceleration where required. Our services encompass engineering, integration and ongoing solution management.

Trading desk communications recording and analytics

We integrate trading desk communications, counterparty connectivity and recording systems across on-premises, hosted and hybrid environments. Our experience with multiple platforms allows us to coordinate communications, networks and recording as an integrated operation.

We extend these capabilities through AI transcription and conversation analysis, transforming voice recordings into structured information for review, quality assurance and compliance support. These solutions help customers supervise and analyze their operations.

Multiple technologies One point of accountability

An institution can have several providers and service contracts while still lacking an integrated technical view. Oreico provides that coordination: we understand how connectivity, communications, recording, cloud and applications interact, and take responsibility for integration and technical management within each project's scope.

Our experience includes turnkey projects encompassing redundancy design, equipment installation and configuration, carrier coordination and data center infrastructure management. We combine bilingual engineering, on-site service, monitoring and support capabilities to serve critical operations.

Presence in Mexico and the United States

We operate through Oreico Trading Solutions SAPI de CV in Mexico and Oreico Network Solutions LLC in the United States. This presence supports enterprise projects and service coordination across both markets.

Our infrastructure and connectivity presence at KIO Santa Fe and Tultitlán supports our integration and service delivery capabilities in Mexico.

INTEGRATED SOLUTIONS

NETWORK SOLUTIONS

Financial Markets Network

Global Financial Markets Connectivity

Oreico connects Mexico to global financial markets

60+ Countries 750 Cities 7,000+ Institutions

Oreico operates the Mexico charter of IPC Financial Markets Network, providing access to IPC's global network of capital market participants.

Financial Markets Network

Mexico charter of IPC FMN. Access to banks, brokers, trading venues and market data providers worldwide.

International voice and data

Managed connections linking Mexico with international counterparties and information providers.

Carrier and data center integration

Network design, carrier coordination, cross-connects and equipment integration for each project.

contact@oreico.net www.oreico.net

Network Engineering and Managed Operations

Multiple Connections. One point of Accountability.

Resilience by Design

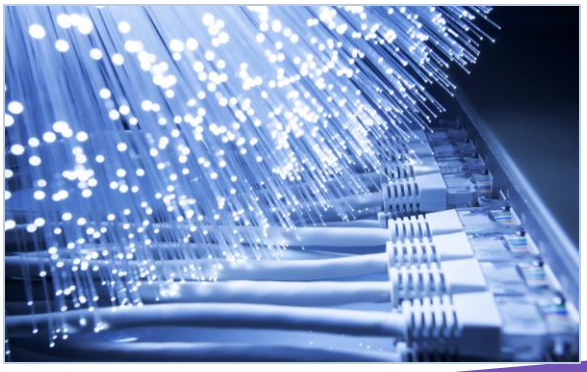

We design redundant architectures, coordinate links and integrate network equipment across data centers, according to the continuity requirements of each project.

Market Data Connectivity

We integrate connectivity to information providers and markets. Oreico's experience includes infrastructure and connectivity projects for Refinitiv, part of LSEG.

Mexico Charter Backed by Local Infrastructure

Oreico operates the Mexico charter of IPC Financial Markets Network and connects more than 40 financial institutions locally, supported by engineering and infrastructure in Mexico.

oreico
INTEGRATED SOLUTIONS

TRADING SOLUTIONS

Trading Room Communications

Recording and financial connectivity

Integrated infrastructure for critical financial operations

One technical view across your trading operation

Oreico integrates communications, recording and connectivity, coordinating platforms and providers through one point of accountability.

IPC One Communications

IPC One View and One TradeDesk. Engineering and integration with IPC Unigy according to project scope.

ASC, Verint and NICE Recording

Recording for on-premises, hosted and hybrid environments, integrated with communications and networks.

Financial Markets Network

Voice and data links to banks, brokers, markets and information providers through IPC Financial Markets Network.

contact@oreico.net www.oreico.net

Integration and Support Across your Operations

Multiple technologies. One point of accountability.

Engineering and continuity

Design, implementation, carrier coordination and support. We assess how communications, recording and connectivity interact to identify and resolve operational issues.

Recording and AI analytics

StratosOne™ adds conversation transcription and analysis for quality review and compliance support, with private or hybrid deployment according to the project.

Financial markets experience

Since 2010, Oreico has delivered financial industry infrastructure. Its network services connect more than 40 financial institutions in Mexico.

StratosOne By OREICO

STRATOSONE™ BY OREICO

Private Cloud and Applied AI

Infrastructure and engineering for enterprise AI

Your data and applications in managed environments

AI backed by infrastructure and engineering

StratosOne™ combines Oreico-owned private cloud with AI applications, systems integration and managed operations for enterprise workloads.

Private cloud in Mexico

Dell Azure Stack Hub infrastructure owned and operated by Oreico, with control over data location and integration.

Applied AI solutions

Inventory and forecasting, document and workflow intelligence, computer vision and conversation analysis.

Flexible deployment

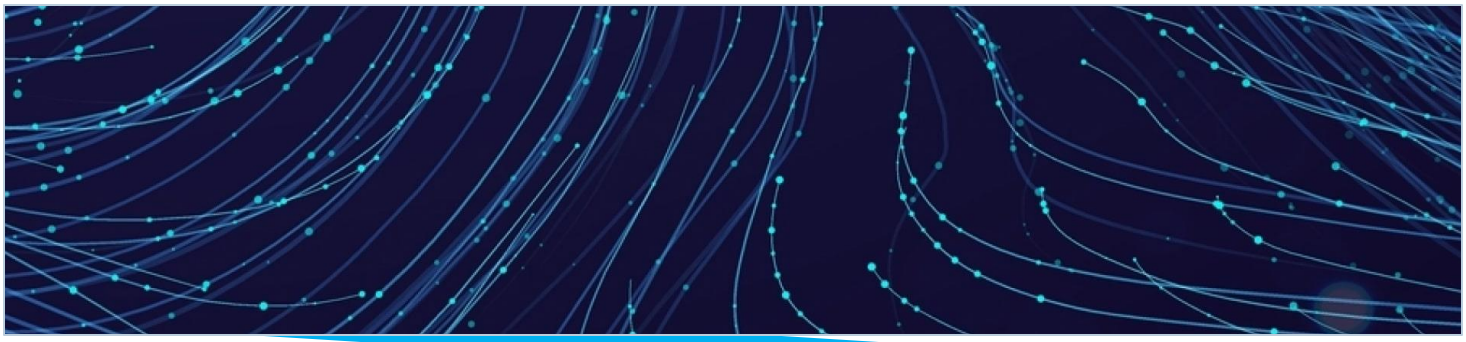

Our private cloud, customer infrastructure or hybrid environments, with GPU acceleration where required.

contact@oreico.net www.stratosone.ai

Enterprise AI
From Design to Operation

Engineering, Integration and Ongoing Management

Data and system integration

We connect AI applications with enterprise data and workflows, selecting models and deployment architectures according to the operational needs of each project.

Managed AI infrastructure

We integrate compute, storage and networks, deploy applications and support ongoing operations. GPU acceleration supports inference and other demanding AI workloads.

Built on Oreico's operational experience

Oreico's financial infrastructure experience supports StratosOne™ delivery, combining engineering and managed operations with private cloud infrastructure in Mexico.
